Buscopan®

Hyoscine Butylbromide Tablets

Manufacturer's Standard, 10 mg

<sup>Pr</sup>Buscopan®

Hyoscine Butylbromide Injection

Manufacturer's Standard, 20 mg/mL

**PART I: HEALTH PROFESSIONAL INFORMATION**

**SUMMARY PRODUCT INFORMATION**

<b>Route of Administration</b>	<b>Dosage Form / Strength</b>	<b>Clinically Relevant Nonmedicinal Ingredients</b>
Oral	Tablets, 10 mg	acacia, anhydrous dibasic calcium phosphate, carnauba wax, colloidal silicon dioxide, corn starch, modified starch, polyethylene glycol 6000, povidone, stearic acid, sucrose, talc, tartaric acid, titanium dioxide, and white wax
Parenteral	Solution, 20 mg/mL	sodium chloride and water for injection

**INDICATIONS AND CLINICAL USE**

BUSCOPAN (hyoscine butylbromide) tablets are indicated for:

- The relief of smooth muscle spasm/cramping of the gastrointestinal system and its associated pain and discomfort.

BUSCOPAN solution is indicated for:

- The relief of acute genitourinary or gastrointestinal spasm (e.g., renal or biliary colic), or to produce smooth muscle relaxation prior to radiological procedures such as pyelography or other diagnostic procedures where spasm may be a problem (e.g., gastro-duodenal endoscopy).

**Geriatrics:**

*No data is available.*

**Pediatrics:**

*No data is available.*

**CONTRAINDICATIONS**

- Hypersensitivity to hyoscine butylbromide, atropinics (see WARNINGS AND PRECAUTIONS) or to any of the product excipients (See Dosage Forms, Composition and Packaging).
- BUSCOPAN (hyoscine butylbromide) tablets are contraindicated in patients with myasthenia gravis, megacolon, mechanical stenosis in the gastrointestinal tract, glaucoma, obstructive prostatic hypertrophy, paralytic or obstructive ileus.
- Parenteral administration is contraindicated in patients with myasthenia gravis, untreated narrow angle glaucoma, prostatic hypertrophy with urinary retention, stenotic lesions or mechanical stenosis of the gastrointestinal tract, tachycardia, angina, cardiac failure, paralytic or obstructive ileus, and megacolon.
- BUSCOPAN solution should not be given by intramuscular injection to patients being treated with anticoagulant drugs since intramuscular haematoma may occur. In these patients, the subcutaneous or intravenous routes may be used.

**WARNINGS AND PRECAUTIONS****General**

BUSCOPAN should not be taken on a continuous daily basis or for extended periods without investigating the cause of abdominal pain.

Patients intolerant of one belladonna alkaloid or derivative may also be intolerant of other belladonna alkaloids or derivatives such as hyoscine butylbromide.

Because of the potential risk of anticholinergic complications, caution should be used in patients prone to narrow angle glaucoma as well as in patients susceptible to intestinal or urinary outlet obstructions and in those inclined to tachyarrhythmia.

After parenteral administration of BUSCOPAN, cases of anaphylaxis, including episodes of shock have been observed. As with all drugs causing such reactions, patients receiving BUSCOPAN by injection should be kept under observation.

Parenteral BUSCOPAN can cause serious and severe cardiac adverse reactions consisting of tachycardia and hypotension (see CONTRAINDICATIONS and Cardiovascular).

One sugar-coated tablet of 10 mg contains 41.2 mg sucrose, resulting in 411.8 mg sucrose per maximum recommended daily dose. Patients with the rare hereditary condition of fructose intolerance should not take this medicine.

### **Cardiovascular**

Parenteral BUSCOPAN can cause adverse reactions of tachycardia and hypotension, which may be more serious or more severe in patients with cardiac conditions such as coronary heart disease, cardiac arrhythmias, hypertension, and mitral stenosis, and in cardiac surgery. Monitoring of these patients is advised until conditions return to normal. Emergency equipment and personnel trained in its use must be readily available.

Parenteral BUSCOPAN should be used with caution in patients with cardiac conditions. Parenteral BUSCOPAN is contraindicated in patients with tachycardia, angina, and cardiac failure (see CONTRAINDICATIONS).

The increase in heart rate may also be undesirable in patients with unstable cardiovascular status in an acute hemorrhage situation.

Because of the potential risk of anticholinergic complications, exercise caution in patients inclined to tachyarrhythmia for BUSCOPAN tablet.

### **Gastrointestinal**

Because of the potential risk of anticholinergic complications, caution should be used in patients susceptible to intestinal outlet obstructions for BUSCOPAN tablet.

Exercise caution in patients with reflux esophagitis or gastrointestinal tract obstructive disease (i.e., achalasia and pyloroduodenal stenosis) due to the ability of anticholinergics/systemic antispasmodics to decrease smooth muscle motility and tone resulting in gastric retention.

Anticholinergics may aggravate hiatal hernia associated with reflux esophagitis, myasthenia gravis or pyloric obstruction.

In patients with ulcerative colitis, large anticholinergic doses may suppress intestinal motility, possibly causing paralytic ileus or resulting in obstruction; also, use may precipitate or aggravate toxic megacolon.

In case severe, unexplained abdominal pain persists or worsens, or occurs together with symptoms like fever, nausea, vomiting, changes in bowel movements, abdominal tenderness, decreased blood pressure, fainting or blood in stool, medical advice should immediately be sought.

### **Genitourinary**

Because of the potential risk of anticholinergic complications, caution should be used in patients susceptible to urinary outlet obstructions for BUSCOPAN tablets.

Parenteral BUSCOPAN (hyoscine butylbromide) should be used with caution in patients with prostatic enlargement. BUSCOPAN may precipitate or aggravate urinary retention in patients with the following conditions: non-obstructive prostatic hypertrophy, urinary retention (or the predisposition to) or obstructive uropathy such as a bladder neck obstruction due to prostatic hypertrophy (see CONTRAINDICATIONS).

### **Ophthalmologic**

Because of the potential risk of anticholinergic complications, caution should be used in patients prone to narrow angle glaucoma for BUSCOPAN tablets.

The parenteral administration of hyoscine butylbromide, particularly of higher doses, has been reported to cause transient disturbances of accommodation which recede spontaneously. Therefore, patients should be cautioned about potential visual problems and the need to exercise care while driving or operating machinery after receiving BUSCOPAN solution.

Therapy should be discontinued if the patient reports any unusual visual disturbances or pressure pain within the eyes.

Elevation of intraocular pressure may be produced by the administration of anticholinergic agents such as BUSCOPAN in patients with undiagnosed and therefore untreated narrow angle glaucoma. Therefore, patients should seek urgent ophthalmological advice in case they should develop a painful, red eye with loss of vision whilst or after taking BUSCOPAN.

### **Special Populations**

#### **Fertility, pregnancy and nursing:**

There is limited data from the use of hyoscine butylbromide in pregnant women.

Animal studies do not indicate direct or indirect harmful effects with respect to reproductive toxicity.

There is insufficient information on the excretion of BUSCOPAN and its metabolites in human milk.

As a precautionary measure, it is preferable to avoid the use of BUSCOPAN during pregnancy and nursing.

No studies on the effects on human fertility have been conducted.

#### **Pediatrics:**

BUSCOPAN is not currently recommended for use in children.

**Geriatrics:**

Geriatric patients are especially susceptible to the anticholinergic side effects of constipation, dryness of mouth and urinary retention (especially in males). If these side effects continue or are severe, discontinuation of medication should be considered.

Due care is necessary when anticholinergics are administered to geriatric patients due to the danger of precipitating undiagnosed acute angle-closure glaucoma.

Administration of anticholinergics/systemic antispasmodics to elderly patients with intestinal atony or in debilitated patients may result in intestinal obstruction.

**Effects on ability to drive and use machines**

No studies on the effects on the ability to drive and use machines have been performed.

However, patients should be advised that they may experience undesirable effects such as accommodation disorder or dizziness during treatment with BUSCOPAN solution. Therefore, caution should be recommended when driving a car or operating machinery. If patients experience accommodation disorder or dizziness, they should avoid potentially hazardous tasks such as driving or operating machinery.

**ADVERSE REACTIONS****Adverse Drug Reaction Overview**

Many of the listed undesirable effects can be assigned to the anticholinergic properties of BUSCOPAN. Anticholinergic side effects of BUSCOPAN are generally mild and self-limited.

Accumulated clinical and postmarketing experience indicates that the following adverse reactions can be expected with the use of BUSCOPAN:

**Solution****Cardiac disorders**

Tachycardia

**Eye disorders**

Visual accommodation disorders, mydriasis, increased intraocular pressure.

**Gastrointestinal disorders**

Xerostomia (dry mouth)

**Immune system disorders**

There have been very rare reports of anaphylactic reactions and anaphylactic shock including fatal outcome.

Skin reactions (e.g. urticaria, rash, erythema, pruritus), and other hypersensitivity, angioedema and fixed drug eruptions have been reported rarely.

Dyspnea

**Renal and urinary disorders**

Urinary retention

**Skin and subcutaneous tissue disorders**

Hypohidrosis, heat sensation/transpiration.

**Vascular disorders**

There have been rare reports of dizziness, blood pressure decreased and flushing.

**Tablets****Cardiac disorders**

Tachycardia

**Gastrointestinal disorders**

Xerostomia (dry mouth), diarrhea, nausea.

**Immune system disorders**

There have been very rare reports of anaphylactic reactions and anaphylactic shock.

Skin reactions (e.g. urticaria, rash, erythema, pruritus), and other hypersensitivity, angioedema and fixed drug eruptions have been reported rarely.

Dyspnea

**Renal and urinary disorders**

Urinary retention

**Skin and subcutaneous tissue disorders**

Hypohidrosis, heat sensation/transpiration.

**Vascular disorders**

Adverse events reported during therapy with BUSCOPAN include increased pulse rate.

## DRUG INTERACTIONS

### Overview

As hyoscine butylbromide can reduce the motility and secretory activity of the gastrointestinal system, the systemic absorption and pharmacologic effects of other oral medications may be delayed.

### Drug-Drug Interactions

**Table 1 - Established or Potential Drug-Drug Interactions**

Hyoscine Butylbromide	Effect	Clinical comment
Tri- and tetracyclic antidepressants Antipsychotics Atropine-like compounds	Can potentiate the anticholinergic effect.	
Antihistamines	Can potentiate the anticholinergic effect.	
Quinidine	Can potentiate the anticholinergic effect.	
Disopyramide	Can potentiate the anticholinergic effect.	
Amantadine	Can potentiate the anticholinergic effect.	
MAO inhibitors	May result in intensified anticholinergic side effects. Also, may block detoxification of anticholinergics thus potentiating their action.	
Anticholinergics	May intensify anticholinergic effects.	
Potassium chloride	May increase the severity of potassium chloride induced gastrointestinal lesions.	
Dopamine antagonists such as metoclopramide.	May result in diminution of the effects of both drugs on the gastrointestinal tract.	
Beta-adrenergic agents	May enhanced tachycardic effects.	
Antacids or adsorbent antidiarrheals	May reduce the absorption of anticholinergics, resulting in decreased therapeutic effectiveness.	Anticholinergics such as hyoscine butylbromide should be given at least one hour before these medications.

### **Drug-Food Interactions**

*Interactions with food have not been established.*

### **Drug-Herb Interactions**

*Interactions with herbs have not been established.*

### **Drug-Laboratory Interactions**

*Interactions with laboratory tests have not been established.*

## **DOSAGE AND ADMINISTRATION**

### **Dosing Considerations**

Individual response to BUSCOPAN (hyoscine butylbromide) may vary and doses should be adjusted accordingly.

### **Recommended Dose and Dosage Adjustment**

Tablets:

One to two 10 mg tablets per day up to a maximum of 6 tablets per day. In prolonged illness which requires repeated dosing, 1 tablet 3 to 5 times a day is recommended.

Solution:

One half (10 mg/0.5mL) to one ampoule (20 mg/1mL) administered parenterally by intramuscular, subcutaneous, or intravenous routes, at a slow injection rate of 1 mL/min. No dilution of the solution is necessary prior to administration. The maximum dose should not exceed 100 mg/day (5 ampoules).

### **Missed Dose**

In case a dose has been missed, take the next dose as scheduled. Do not double the dose.

### **Administration**

Tablets should be swallowed whole with a glass of water.

The rapid action of injected BUSCOPAN is advantageous in acutely ill patients and in those situations where prompt spasmolytic activity facilitates diagnostic procedures such as radiological examinations. BUSCOPAN solution may also be used intramuscularly 10-15 minutes before radiological examinations of the stomach to slow peristaltic movements.

### **Dilution and Stability of Parenteral BUSCOPAN:**

Although dilution prior to administration is not required, BUSCOPAN solution is compatible with the following solutions, should dilution be desirable:

Ringers Solution  
Ringers Lactate  
NaCl 0.9%  
Laevulose 5%  
Glucose 10%

Solutions must be mixed under sterile conditions and are stable for 8 hours.

## **OVERDOSAGE**

For management of a suspected drug overdose, contact your regional Poison Control Centre immediately.

### **Symptoms**

In the case of overdose, anticholinergic effects may be observed.

Single oral doses of up to 590 mg and quantities of active drug up to 1090 mg within 5 hours have produced dry mouth, tachycardia, slight drowsiness and transient visual disorders. Other symptoms include urinary retention, reddening of the skin, and inhibition of gastrointestinal motility.

Other symptoms which occurred in animals and which may be encountered in humans include: shock, Cheyne-Stokes respiration, respiratory paralysis, clonic spasms, paresis of the striated muscle, coma, paralytic ileus and cystoparalysis.

### **Treatment**

In the case of an oral overdose, perform gastric lavage with activated charcoal followed by magnesium sulfate (15%). BUSCOPAN overdose symptoms respond to parasympathomimetics.

For patients with glaucoma, administer pilocarpine locally. If necessary, parasympathomimetics should be administered, e.g. neostigmine 0.5-2.5 mg i.m. or i.v.. Cardiovascular complications should be treated according to usual therapeutic principles. In case of respiratory paralysis: intubation, artificial respiration.

Catheterisation may be required for urinary retention.

Other overdose symptoms should be treated with standard supportive therapy.

## **ACTION AND CLINICAL PHARMACOLOGY**

### **Mechanism of Action**

BUSCOPAN (hyoscine butylbromide) is an antispasmodic agent which relaxes the smooth muscle of the gastrointestinal, biliary and urinary (parenteral formulation) tracts. It is believed to act predominantly at the parasympathetic ganglia in the walls of the viscera of these organs. Structurally, BUSCOPAN exists as a quaternary ammonium compound and as a single positively charged cation throughout the entire pH range.

### **Pharmacokinetics**

#### **Solution**

##### **Absorption and distribution**

After intravenous administration hyoscine butylbromide is rapidly distributed ( $t_{1/2\alpha} = 4$  min,  $t_{1/2\beta} = 29$  min) into the tissues. The volume of distribution ( $V_{ss}$ ) is 128 L (corresponding to approx. 1.7 L/kg). Because of its high affinity for muscarinic receptors and nicotinic receptors, hyoscine butylbromide is mainly distributed on muscle cells of the abdominal and pelvic area as well as in the intramural ganglia of the abdominal organs. Plasma protein binding (albumin) of hyoscine butylbromide is approximately 4.4%. Animal studies demonstrate that hyoscine butylbromide does not pass the blood-brain barrier, but no clinical data to this effect is available. Hyoscine butylbromide (1 mM) has been observed to interact with the choline transport (1.4 nM) in epithelial cells of human placenta *in vitro*.

##### **Metabolism and elimination**

The main metabolic pathway is the hydrolytic cleavage of the ester bond. The half-life of the terminal elimination phase ( $t_{1/2\gamma}$ ) is approximately 5 hours. The total clearance is 1.2 L/min. Clinical studies with radiolabeled hyoscine butylbromide show that after intravenous injection 42 to 61% of the radioactive dose is excreted renally and 28.3 to 37% faecally.

The portion of unchanged active ingredient excreted in the urine is approximately 50%. The metabolites excreted via the renal route bind poorly to the muscarinic receptors and are therefore not considered to contribute to the effect of the hyoscine butylbromide.

#### **Tablets**

##### **Absorption**

As a quaternary ammonium compound, hyoscine butylbromide is highly polar and hence only partially absorbed following oral (8%) or rectal (3%) administration. After oral administration of single doses of hyoscine butylbromide in the range of 20 to 400 mg, mean peak plasma concentrations between 0.11 ng/mL and 2.04 ng/mL were found at approximately 2 hours. In the same dose range, the observed mean  $AUC_{0-tz}$ -values varied from 0.37 to 10.7 ng h/mL. The median absolute bioavailabilities of different dosage forms, i.e. coated tablets, suppositories and oral solution, containing 100 mg of hyoscine butylbromide each were found to be less than 1%.

### Distribution

Because of its high affinity for muscarinic receptors and nicotinic receptors, hyoscine butylbromide is mainly distributed on muscle cells of the abdominal and pelvic area as well as in the intramural ganglia of the abdominal organs. Plasma protein binding (albumin) of hyoscine butylbromide is approximately 4.4%. Animal studies demonstrate that hyoscine butylbromide does not pass the blood-brain barrier, but no clinical data to this effect is available. Hyoscine butylbromide (1 mM) has been observed to interact with the choline transport (1.4 nM) in epithelial cells of human placenta *in vitro*.

### Metabolism and elimination

Following oral administration of single doses in the range of 100 to 400 mg, the terminal elimination half-lives ranged from 6.2 to 10.6 hours. The main metabolic pathway is the hydrolytic cleavage of the ester bond. Orally administered hyoscine butylbromide is excreted in the faeces and in the urine. Studies in man show that 2 to 5% of radioactive doses is eliminated renally after oral, and 0.7 to 1.6% after rectal administration. Approximately 90% of recovered radioactivity can be found in the faeces after oral administration. The urinary excretion of hyoscine butylbromide is less than 0.1% of the dose. The mean apparent oral clearances after oral doses of 100 to 400 mg range from 881 to 1420 L/min, whereas the corresponding volumes of distribution for the same range vary from 6.13 to 11.3 x 10<sup>5</sup> L, probably due to very low systemic availability.

The metabolites excreted via the renal route bind poorly to the muscarinic receptors and are therefore not considered to contribute to the effect of the hyoscine butylbromide.

## **STORAGE AND STABILITY**

BUSCOPAN tablets and solution should be protected from light and heat. BUSCOPAN solution should be protected from freezing. Products should be stored at 15 – 30°C and are stable up to the expiration date indicated on the label.

## **DOSAGE FORMS, COMPOSITION AND PACKAGING**

### Dosage Forms

Tablets: Round, white, biconvex sugar-coated tablets each containing 10 mg of hyoscine butylbromide.

Solution: Containing 20 mg of hyoscine butylbromide in 1 mL aqueous solution.

### Composition

Tablets: Hyoscine butylbromide

Non-medicinal ingredients include acacia, anhydrous dibasic calcium phosphate, carnauba wax, colloidal silicon dioxide, corn starch, modified starch, polyethylene glycol 6000, povidone, stearic acid, sucrose, talc, tartaric acid, titanium dioxide, and white wax.

Solution: Hyoscine butylbromide

Non-medicinal ingredients include sodium chloride and water for injection.

### **Packaging**

Tablets:

Blister packages of 10 and 20 tablets.

Formats of 10, 20, 40.

Solution: Packages of 10 ampoules.

## PART II: SCIENTIFIC INFORMATION

### PHARMACEUTICAL INFORMATION

#### Drug Substance

Proper name: hyoscine butylbromide

Chemical name: (1S,3S,5R,6R,7S)-8-Butyl-6,7-epoxy-3-[(S)-tropoyloxy] tropanium bromide

Chemical structure:

Molecular formula and molecular mass: C<sub>21</sub>H<sub>30</sub>BrNO<sub>4</sub>, 440.4

Physicochemical properties: A white or almost white, odourless or almost odourless, crystalline powder, soluble 1 to 1 in water, 1 in 50 of alcohol, and 1 in 5 of chloroform. A 10% solution in water has a pH of 5.5 to 6.5.

## CLINICAL TRIALS

### Study demographics and trials design

The study 218.202 was designed as a 3-week oral, multi-center, randomized, placebo controlled, double-blind, parallel-group comparison in outpatients who were confirmed to be eligible in terms of pain intensity and compliance after a 1-week, single-blind placebo run-in phase.

The aim of the study was to demonstrate statistical superiority of the fixed oral combination product Buscopan Plus [hyoscine butylbromide (10 mg) + acetaminophen (500 mg); t.i.d] against individual constituents Buscopan (hyoscine butylbromide (HBB); 10 mg t.i.d.) & Paracetamol (acetaminophen (APAP); 500 mg t.i.d.), and Placebo in patients with recurrent painful gastric or intestinal spasms.

A total of 1,637 patients with functional gastrointestinal disorders in which painful spasm was the principal symptom were entered into a four-arm double-blind study (Table 2). After a 1 week placebo run-in, they were randomized to 3 weeks of treatment with one of the four therapies with assessments after 1, 2 and 3 weeks. Pain intensity (Visual Analogue Scale) and pain frequency (Verbal Rating Scale) were self-assessed daily

**Table 1 - Summary of baseline demographic characteristics (ITT population)**

Study #	Trial design	Dosage, route of administration and duration	Study subjects (n=number)	Mean age (range)	Gender (M/F)
218.202	Multicenter double-blind randomized placebo-controlled parallel-group comparison, after single-blind placebo run-in phase for eligibility.		Total: 1637		
		<b>HBB</b> 10 mg p.o 3 times daily	400	44 (17-76)	34%/66%
		<b>APAP</b> 500 mg p.o 3 times daily	390	45 (17-74)	35%/65%
		<b>HBB + APAP</b> 10 mg + 500 mg paracetamol p.o 3 times daily	387	44 (18-73)	36%/64%
		<b>Placebo</b> 3 times daily	394	45 (17-76)	37%/63%
Duration: 21 days					

The primary endpoint was the mean decrease in pain intensity, measured by VAS(PI) visual analogue scale, over a treatment period of 3 weeks in the treatment phase of the study (study day 8-28) recorded daily by patients in the evening in their patient dairies. The mean decrease was calculated as the absolute difference between the mean of the VAS(PI) entries over the first 21

days of the treatment phase and the entry on the last day of the placebo run-in phase (baseline value).

The mean decrease in the frequency of the pain, measured on the VRS verbal rating scale, the global assessment of efficacy and tolerability by the patient at the end of the study, the global assessment of efficacy and tolerability by the investigator at the end of the study and the reporting of adverse events were evaluated as secondary criteria.

### Study results

Pain intensity on the Visual Analogue Scale (VAS) decreased in all treatment groups. The mean decreases of the VAS (PI) from baseline of 2.37, 2.28 and 2.35 cm (adjusted means, ITT) for the treatments with Buscopan plus (HBB + APAP), Buscopan (HBB) and Paracetamol (APAP) were significantly larger ( $p = 0.0001$ ) than that for Placebo (1.85); the mean decrease of the VAS (PI) for Buscopan plus (HBB + APAP), was not significantly different from that for Buscopan ( $p = 0.176$ ) and Paracetamol ( $p = 0.415$ ).

**Table 2: Descriptive statistics (Mean  $\pm$  SD) of the VAS (PI, cm): baseline, mean on treatment and mean change from baseline (ITT population)**

Vas (PI, cm)	Buscopan® Plus	Buscopan®	Paracetamol	Placebo
Baseline	5.12 $\pm$ 1.76	5.08 $\pm$ 1.70	5.06 $\pm$ 1.68	5.09 $\pm$ 1.74
Mean value on treatment	2.50 $\pm$ 1.64	2.64 $\pm$ 1.62	2.55 $\pm$ 1.49	3.05 $\pm$ 1.73
Mean change from baseline	2.62 $\pm$ 2.11	2.45 $\pm$ 2.07	2.51 $\pm$ 1.97	2.04 $\pm$ 1.95

**Table 3: p-value and 95 % CI for the estimated-treatment differences of the mean changes of VAS (PI) from baseline (ITT population)**

Treatment contrast	Mean difference	95 % CI	p-value
Buscopan® plus vs. Buscopan®	0.096	-0.106 to 0.298	0.1759
Buscopan® plus vs. Paracetamol	0.022	-0.181 to 0.225	0.4149
Buscopan® plus vs. Placebo	0.522	0.319 to 0.725	0.0001
Buscopan® vs. Placebo	0.426	0.225 to 0.627	0.0001
Paracetamol vs. Placebo	0.499	0.297 to 0.702	0.0001

After 21 days of treatment, the mean VRS (pain frequency) [maximum score of 3] decreased from 1.68  $\pm$  0.76 to 0.62  $\pm$  0.71, from 1.68  $\pm$  0.75 to 0.69  $\pm$  0.75, from 1.67  $\pm$  0.71 to 0.73  $\pm$  0.76 and from 1.67  $\pm$  0.71 to 0.93  $\pm$  0.85 under treatment with Buscopan plus, Buscopan, Paracetamol and Placebo, respectively (ITT). The mean decreases of the VRS (pain frequency) from baseline of 0.71, 0.68 and 0.68 (ls\_ adjusted means, ITT) for the treatments with Buscopan plus, Buscopan and Paracetamol were statistically significantly larger ( $p = 0.0001$ ) than that for placebo ( $p = 0.53$ ); the mean decrease of the VRS (pain frequency) for Buscopan plus was not significantly different from that for Buscopan ( $p = 0.158$ ) and Paracetamol ( $p = 0.201$ ).

**Table 4: Descriptive statistics (Mean ± SD) of the VRS (frequency) at baseline and after 1, 7, 14 and 21 days of the treatment phase (ITT population)**

ITT	Buscopan® Plus	Buscopan®	Paracetamol	Placebo
Baseline	1.68 ± 0.76	1.68 ± 0.75	1.67 ± 0.71	1.67 ± 0.71
Day 1	1.43 ± 0.72	1.40 ± 0.68	1.49 ± 0.71	1.50 ± 0.75
Day 7	0.96 ± 0.83	1.03 ± 0.77	0.96 ± 0.76	1.10 ± 0.80
Day 14	0.79 ± 0.80	0.86 ± 0.78	0.79 ± 0.78	1.04 ± 0.83
Day 21	0.62 ± 0.71	0.69 ± 0.75	0.73 ± 0.76	0.93 ± 0.85
Mean value on treatment	0.91 ± 0.56	0.95 ± 0.55	0.95 ± 0.53	1.11 ± 0.60
Mean change from baseline	0.77 ± 0.82	0.73 ± 0.78	0.72 ± 0.75	0.56 ± 0.71

**Table 5: p-values and 95 % CI for the estimated-treatment differences of the mean changes of VRS (pain frequency) from baseline (ITT population)**

Treatment contrast	Mean difference	95 % CI	p-value
Buscopan® plus vs. Buscopan®	0.034	-0.034 to 0.104	0.1578
Buscopan® plus vs. Paracetamol	0.030	-0.039 to 0.098	0.2005
Buscopan® plus vs. Placebo	0.188	0.118 to 0.257	0.0001
Buscopan® vs. Placebo	0.153	0.084 to 0.221	0.0001
Paracetamol vs. Placebo	0.158	0.089 to 0.227	0.0001

All treatments were well tolerated: 16%, 14%, 17% and 11% of patients on HBB, APAP, combination and placebo groups reported at least one adverse event.

There were no treatment effects in baseline and all active treatments were statistically significantly superior to Placebo from visit 2 to 4 in patients with recurrent painful gastric or intestinal spasms.

## READ THIS FOR SAFE AND EFFECTIVE USE OF YOUR MEDICINE

### PATIENT MEDICATION INFORMATION

#### Pr **Buscopan**<sup>®</sup> **Hyoscine Butylbromide Injection**

Read this carefully before you start taking **BUSCOPAN**. This leaflet is a summary and will not tell you everything about this drug. Talk to your healthcare professional about your medical condition and treatment and ask if there is any new information about **BUSCOPAN**.

#### **What is BUSCOPAN solution used for?**

- For the relief of abdominal spasms (cramps), pain and discomfort in the:
  - stomach,
  - gut (intestines / bowel),
  - biliary tract,
  - bladder or
  - uterus.
- Before medical tests, to relax the smooth muscles of the:
  - stomach,
  - gut (intestines / bowel),
  - biliary tract,
  - urinary tract.

#### **How does BUSCOPAN solution work?**

- Abdominal cramps (spasms) are caused by sudden, strong tightening of muscles.
- Relieves cramps (spasms), pain, discomfort by relaxing tight muscles of the:
  - stomach,
  - gut (intestines / bowel),
  - biliary tract,
  - bladder or
  - uterus.

#### **What are the ingredients in BUSCOPAN solution?**

Medicinal ingredient: Hyoscine butylbromide.

Non-medicinal ingredients: Sodium chloride and water for injection.

#### **BUSCOPAN comes in the following dosage forms:**

Solution, 20 mg/mL.

**Do not use BUSCOPAN solution if you:**

- are allergic to:
  - hyoscine butylbromide.
  - atropinics.
  - any of the ingredients in the product (see list in **What are the ingredients in BUSCOPAN solution**).
- are taking this drug by injection into the muscle and you are taking blood thinners (anticoagulants). Taking the drugs at the same time may cause bleeding in the muscle.
- have any of the below conditions:
  - muscle wasting disease (myasthenia gravis).
  - untreated high pressure inside of your eye (closed-angle glaucoma).
  - problems with urination due to prostate issues.
  - narrowing parts of the gastrointestinal tract (stenosis).
  - fast heartbeat (tachycardia).
  - heart failure.
  - chest pain and short breath (angina).
  - your intestine stopped working or may be blocked;
    - Symptoms include:
      - severe abdominal pain with absence of stools,
      - and/or nausea,
      - and/or vomiting.
  - enlarged bowel (megacolon).
- are pregnant, likely to get pregnant, or are breast-feeding.

**To help avoid side effects and ensure proper use, talk to your healthcare professional before you take BUSCOPAN. Talk about any health conditions or problems you may have, including if you:**

- are a man and have prostate problems.
- have stomach acid backing up in your throat (reflux-esophagitis).
- have any blockage in your gastrointestinal tract. This includes your esophagus, stomach, intestines and anus.
- have inflamed bowels (e.g. ulcerative colitis).
- have any heart problems

**Other warnings you should know about:**

Do not drive or operate machinery if you suffer:

- dizziness.
- blurred vision.

After you receive **BUSCOPAN** injection, your health care professional should keep you under observation for any signs of an allergic reaction.

If the following occurs after you receive **BUSCOPAN** injection, get medical help immediately:

- if you have severe and unexplained stomach pain that does not go away or gets worse

- if you have severe and unexplained stomach pain that occurs with other symptoms such as:
  - fever
  - nausea
  - vomiting
  - changes in bowel movements
  - abdominal tenderness
  - decreased blood pressure
  - fainting
  - blood in stool
- if you have painful, red eye(s) with loss of vision

**Tell your healthcare professional about all the medicines you take, including any drugs, vitamins, minerals, natural supplements or alternative medicines. The following may interact with BUSCOPAN:**

- Amantadine, medicine used to prevent or treat certain flu infections (type A)
- Anticholinergics (e.g. ipratropium, atropine)
- Antihistamines, medicines used to treat allergies (e.g. diphenhydramine, hydroxyzine)
- Beta-adrenergic agents, medicines used to treat the symptoms of asthma, bronchitis, emphysema, and other lung diseases (e.g. salbutamol)
- Dopamine antagonists, medicines used for the prevention of vomiting (e.g. metoclopramide)
- Heart medications (e.g. disopyramide, quinidine)
- MAO inhibitors, medicines used to treat depression and mood disorders (e.g. moclobemide, selegiline, tranylcypromine, phenelzine).
- Tricyclic antidepressants, medicines used to treat anxiety or depression (e.g. amitriptyline, doxepin)

If you are taking antacids or adsorbent anti-diarrheals, your healthcare professional may tell you to take them at least 1 hour before taking **BUSCOPAN**.

**How to take BUSCOPAN solution:**

**Usual dose (Adults):**

Administer one-half (10 mg/0.5 mL) to 1 ampoule (20 mg/mL) at a slow injection rate of 1 mL/min by one of the following routes:

- intramuscular.
- subcutaneous.
- intravenous.

No dilution of solution is needed. The maximum dose should not exceed 100 mg/day (5 ampoules).

## What are the possible side effects from using BUSCOPAN solution?

This drug may sometimes cause:

- dry mouth.
- feeling hot and decreased sweating.
- increased heart rate.
- not being able to pass urine.
- increase fluid pressure inside your-eyes, mydriasis (dilated pupils), or problems with your vision.
- other rare side effects may occur such as:
  - dizziness.
  - flushing.
  - allergic reactions (skin rash, itching).
  - skin reactions (e.g. hives, rash, skin redness, itching).
  - rapid swelling of the skin and skin tissue (angioedema).
  - decreased blood pressure.
  - difficulty in breathing (usually in patients who suffer with asthma or allergy).

There have been very rare reports of severe, allergic reactions and severe allergic shock including death.

Should you have a painful, red eye with loss of vision, seek urgent medical advice.

If you experience any of these effects which persist or become troublesome or any side effects not listed here, talk to your healthcare professional.

### Reporting Side Effects

You can report any suspected side effects associated with the use of health products to Health Canada by:

- Visiting the Web page on Adverse Reaction Reporting (<https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada/adverse-reaction-reporting.html>) for information on how to report online, by mail or by fax; or
- Calling toll-free at 1-866-234-2345.

*NOTE: Contact your health professional if you need information about how to manage your side effects. The Canada Vigilance Program does not provide medical advice.*

### Storage:

Protect from freezing, heat and light. Store at room temperature (15 - 30°C). Product is stable up to the labelled expiry.

Keep out of reach and sight of children.
